

# DRIVER FCL HAZMAT Function Specific Training SOP

- 1) Identify HAZ Cargo on any Dispatched BOL's. DO NOT EVER tender a HAZMAT shipment that was not dispatched by your dispatcher.
- 2) Confirm HAZDEC (if export) and MSDS is attached. Confirm BOL has highlighted: UN#, Proper Shipping Name, CL, PG, and Emergency Contact Ph#; in that order.
- 3) If missing any information, contact Dispatch immediately.
- 4) Confirm you have a Emergency Response book on hand, or in truck.
- 5) Confirm you have the proper chassis for the weight of the shipment. Refer to Drivers Training log for weights.
- 6) Confirm your routes prior to picking up cargo to ensure you are avoiding tunnels and unnecessary stops.
- 7) When picking up container, confirm container is placarded correctly and matches your BOL. If not, contact Dispatch immediately.
- 8) Before transporting container, confirm chassis dogs have been locked, and container is in good condition. Confirm there are no leaks or visible liquids coming from the container.
- 9) Reconfirm route. Confirm with Dispatch container has been safely loaded and confirm your ETA to delivery location.
